

Controlling Access to Content

Within a course there may be times where you wish to control which resources a student or groups of students may access.

This is achieved via **Activity Completion** and **Restrict Access Conditions**.

- [Activity Completion Conditions](#)
- [Restrict Access Conditions](#)
- [Examples of Controlling Access to Resources](#)

Activity Completion Conditions

These govern the rules that allow Myplace to automatically determine if a student has "completed" an activity.

"Completion" can have a variety of different meanings depending on the activity, so it is important to review the options afforded by each activity or resource plugin in Myplace.

Restrict Access Conditions

Restrict Access Conditions define the rules that determine if a student can access a given activity. These can be based on a range of different conditions, including group membership, grades, user profile field values, and activity completion conditions.
