

# The marks return Validation Report is unreadable

I want to use the validation report to check my marks return, but it has given me all the data on one line and is unusable.

### Problem

I have transferred my marks return and received the validation report. I want to use it to check my marks return accuracy. However, it has printed all the report data onto one continuous line.

### Solution

Right-click the email and select View source. The data now appears (in a window) in columns.
